```

Plotting predicted vs index plot for a fixed actual value of 30. The plot is surprising intuitively because of single anomaly(near predicted < 20) however the topmost point is NOT AN ANOMALY

despite the large deviation.

SVC Model fitting because it uses its support vectors to detect to the anomalies

F1 Score Predtion

```
In [97]: from sklearn.metrics import f1_score
    print(f1_score(y,anm.predict(points)))
0.35794061563606644
```

Model is ready now we are going to predict over our test set

```
